Subject Index

Note: The letters 'f' and 't' following the locators refer to figures and tables, respectively.

A

Abrasion

- grit blasting 98
- mechanical 128
- resistance 29, 41, 55, 70
- surface treatments 98

ABS *see* Acrylonitrile butadiene styrene

Acetal 41, 93, 103

- adhesive shear strengths 41–42

Acetal polyethylene 129

'Acetoxy' curing silicones 23

Acrylics 18, 21, 31, 41, 53, 88, 100, 105, 144

- based adhesives 141
- methylmethacrylate 59
- two-part 17–18, 48, 59, 99–100, 135
- ultraviolet 47, 144

Acrylonitrile butadiene styrene 29, 32, 35–36, 48, 131

Adhesion, theories of 148–149

- adhesive sticking, methods 148f
- adsorption 149
- bonded joint, strength of 149
- cohesive failure 149, 150f
- diffusion 149
- dipole 149
- electrostatic forces 149
- lower modulus adhesive 150
- polymer chains 149
- solvent-based adhesives 149
- 'valence forces' 149

Adhesives, introduction to 1–26

- bonding plastics 1
- cyanoacrylates 1–8

- epoxies 19–21
 - flexible adhesive sealants 21–24
 - hot melt adhesives 25–26
 - low-viscosity 106, 124
 - open time of 120
 - selecting viscosity 89–91
 - two-part acrylics 17–18
 - ultraviolet-curing adhesives 9–17
 - Adhesives, dispensing systems 121–125
 - automatic units 121
 - dispensers, semi-automatic 121, 123
 - dispensing syringe 123
 - extrusion guns, manual 121
 - hot-melt guns 121
 - manual units 121, 122
 - peristaltic pumps, manually operated 121
 - pinch valves, hand-held 121
 - pneumatic system 121
 - pressure pot dispensing 123–125
 - programmable logic controller 121
 - Amorphous thermoplastics 21, 27–29, 28f, 29, 30, 32, 35, 91, 131, 152
 - acrylonitrile-butadiene-styrene 29
 - chemically resistant 28
 - macromolecule chains 28
 - polymer classes 28
 - polystyrene 29
 - Araldite 55
 - Auger electron spectroscopy 153
 - Automatic systems 125–126
 - dispense valve 126
 - for complex profiles 126
 - semi-automatic units 125
- B**
- Bakelite 52
 - ‘Bead-on-bead’ application 17, 105, 116
 - Blooming, 49, 60, 107, 145–148
 - Bonding of elastomers 72–73
 - adhesive shear strengths 72t
 - glass transition temperature 73
 - modified flexible cyanoacrylates 73

- nitrile rubber bonded with flexible cyanoacrylate 73f
- rubber-toughened cyanoacrylate 73
- Bonding of low-energy plastics 93–100
 - surface energy, measurement of 97
 - surface treatments 97–99
 - abrasion 98
 - corona discharge 98
 - flame treatment 98–99
 - plasma treatment 98
 - use of primers 99
 - surface wetting 93–97
 - two-part acrylics 99–100
- Bonding of thermoplastics 47–49
 - adhesive shear strengths 48t
 - blooming 49
 - cyanoacrylates 48
 - epoxy grades 47
 - transparent substrates 49
 - two-part acrylics 48
- Bonding of thermoset plastics 59–60
 - blooming 60
 - cyanoacrylates, ethyl-based 59
 - methylmethacrylate acrylics 59
 - two-part acrylics 59
- Bond line thickness 88–89
 - cleavage loads 89
 - cured cyanoacrylate film 88
 - epoxies or acrylics 88
 - internal chamfer 88
 - joint gaps 86, 89
 - peel load 89
 - polyurethanes 89
 - silicones and modified silanes 89
- Butt joint 86–88
 - adherends 86
 - adhesive 88
 - blind holes, applying adhesives to 87f
 - forms of butt joint 87f
 - increasing strength of joint by small chamfer 88f
 - offset load 86
 - peel load 86
 - in joint line 88f

- Butyl rubber 4, 62–63, 72
 - adhesive shear strength of 63
 - gas permeability of 62
 - halogenated form 62
 - solvent-based adhesives 62
 - thermal performance 62

C

- Chemicals Hazard Information and Packaging for Supply Regulations 108
- Control of Substances Hazardous to Health 110–111
- Copolyester thermoplastic elastomer 63
 - adhesive shear strength 63t
 - cyanoacrylates 63
 - performance of 63
- Corona discharge 97, 98
- COSHH *see* Control of Substances Hazardous to Health
- Cure method 118
- ‘Cure-on-demand’ UV-curing adhesive 9, 107
- Curing, systems, light-emitting-diode 14

- Cyanoacrylates 1–8, 31, 61, 103
 - alkoxy ethyl 4–5
 - blooming of 145–148
 - acidic deposits 146f
 - adhesive monomer, escaping of 145f
 - bonding application 147
 - ethyl/methyl grades 147
 - excess adhesive 146
 - heavy-molecular-weight 147
 - low relative humidity 147–148
 - plasma treatment 146
 - plastic extrusion 146f
 - polymerisation 146
 - rubber-toughened cyanoacrylates 145
 - ultraviolet-curing activator 146
 - vapour 146
 - water vapour 145
 - cure speed of 3f
 - fixture strength 3
 - ultraviolet 3
 - curing of 2f
 - acidic stabilizer for 2f

- adhesive monomer for 2f
- durability of 130-132
- ethyl 4
- flexible 7-8
- methyl 4
- ophthalmic blade bonded 112
- surface insensitive 5
- thermally resistant 6-7
- thixotropic gel 1
- toughened 5-6, 6f
 - crack arrester 5
 - ethyl cyanoacrylates 5
 - resistance to peel loads 6f
- types of 1-8
- ultraviolet-curing 8
- Cyanoacrylates, alkoxy ethyl 4-5
 - 'bloom' 5
 - molecular weight 5
 - volatility 5
- Cyanoacrylates, allyl-based 7
- Cyanoacrylates, ethyl 4
 - acrylonitrile butadiene styrene 4
 - butyl rubber 4
 - polycarbonate 4
 - poly(vinyl chloride) 4
- Cyanoacrylates, gamma sterilisation of 132
- Cyanoacrylates, surface insensitive 5

 - blind holes 85-86
 - cross holes 84-85
 - design details 82-84
 - ethyl cyanoacrylate 81
 - low viscosity 82
 - hydraulic locking 85
 - inner (male) substrate 82

- adhesive monomer for 2f
- durability of 130-132
- ethyl 4
- flexible 7-8
- methyl 4
- ophthalmic blade bonded 112
- surface insensitive 5
- thermally resistant 6-7
- thixotropic gel 1
- toughened 5-6, 6f
 - crack arrester 5
 - ethyl cyanoacrylates 5
 - resistance to peel loads 6f
- types of 1-8
- ultraviolet-curing 8
- Cyanoacrylates, alkoxy ethyl 4-5
 - 'bloom' 5
 - molecular weight 5
 - volatility 5
- Cyanoacrylates, allyl-based 7
- Cyanoacrylates, ethyl 4
 - acrylonitrile butadiene styrene 4
 - butyl rubber 4
 - polycarbonate 4
 - poly(vinyl chloride) 4
- Cyanoacrylates, gamma sterilisation of 132
- Cyanoacrylates, surface insensitive 5
 - acidic substrates 5
 - porous substrates 5
 - super glue 5
- Cyanoacrylate, ultraviolet-curing 4, 147
- Cycle time 118
- Cyclohexanone 149
- Cylindrical joints 81-86
 - air trapping 86f
 - blind holes 85-86
 - cross holes 84-85
 - design details 82-84
 - ethyl cyanoacrylate 81
 - low viscosity 82
 - hydraulic locking 85
 - inner (male) substrate 82

- joining dissimilar plastics 82
- length to diameter ratio 81
- outer (female) substrate 81, 82
- surface wetting 81
- tube bonding 83f
- ultraviolet-curing adhesive 82

D

- Diallyl phthalate 54
 - adhesive shear strengths 54t
 - Differential scanning calorimetry 144
 - Adhesives, dispensing of 115–126
 - automatic systems 125–126
 - basic principles 115–121
 - cost 121
 - cure method 118
 - cycle time 118
 - dispensing systems 121–125
 - dispense quantity 118–120
 - health and safety 120–121
 - open time 120
 - single- or two-part adhesive 115–116
 - viscosity 116–117
 - ‘dog bone’ effect 118
 - knit joint 119
 - in closed bead, minimising effect of 119f
 - positional accuracy 118
 - robot programming 119
 - standard/altered groove 119–120f
 - valve design 119
- Dog bone effect 117–118
 - Double lap joint 80–81
 - liquid adhesive 80
 - modified tongue and offset 81f
 - Double lap shear joint 80
 - DSC *see* Differential scanning calorimetry
 - Durability 127–136
 - cyanoacrylates 130–132
 - effect of water on ethyl 132f
 - effect of water on metal lap shears 131f
 - for medical applications 132
 - polymeric substrates 132

- standard lap shear test coupon 131f
- effect of humidity 130
- effect of water absorption 130
- environmental testing of 135–136
- epoxies 135
 - based adhesives 127
 - humidity resistance 135
- humidity and water absorption 130
 - grit-blasted mild steel 130
 - moisture resistance 130
 - thermoplastics 130
- joint design 128
- substrate bonded 127, 129–130
- surface finish and preparation 127–128
- surface preparation 127–128
- two-part acrylics 135
 - resistance and peel strength 135
- UV-curing adhesives 132–135
 - bonding polyurethane tubing 133f
 - for medical applications 133–135
 - joint design 132
 - potting/encapsulation 133
 - silane additives 132
 - silicone 133
