 - wet strength 91–94
 - retention and drainage aids (RDA) 127–130
 - roll conveying 396
 - roll covers 229–242
 - roll defects 384
 - roll handling 392–400
 - roll wrapping 392
 - rolls 223–242
 - couch 225
 - dandy 226–227, 271
 - deflection control 226–229
 - forming 224
 - hydrein 228
 - Nipcorect 229
 - rotogravure, calendering 304–305
 - rotogravure printing, coating 338
 - rotor/stator geometry, refining 175
 - roughness, paperboard 323
 - rubber roll covers 233–235

5

- satin white 60
- scanning measurement, quality control system 406
- SC-A/offset, calendering 305
- SC-B/offset, calendering 304
- screening 162–167
- screening residue, coating colors 369
- screens, coating 361
- screw presses 189
- secondary fibers
 - bleaching 183–185
 - preparation 205
- selective flotation 176–180
- separation processes, stock preparation 152
- shading, paper surface 123
- shear rate, coating 344
- sheet forming concept, paper machines 326
- shoe presses 278
- shrinkage
 - paper properties 449
 - paper web 286
- silicates, amorphous 53–54
- silicone base paper, calendering 307
- single nip, press section 279
- single-drum winders 390
- size press, surface sizing 291
- sized papers, measurements 88
- sizing
 - fundamentals 84
 - historical background 11
- sizing agents 83–88
 - resin-based 84
- sizing materials
 - application advices 86
 - synthetic 84–86
- slimicides, process chemicals 135–137
- slitting techniques 384
- sludge, wastewater 430
- sludge processes, wastewater 424
- sludge removal, flotation 182
- slushing 155
- smoothness
 - coated surface 370
 - paper surface 125
 - paper testing 471
- soft covered drums, two-drum winders 389
- soft tissue production, paper machines 325
- softcalenders 299
- sole-binder, paper coating 106
- solid bleached board, components 354
- solid content, coating colors 368
- solid removal, wastewater 423
- solid wastes
 - composition 429–434
 - final disposal 437–438
 - paper mills 428
 - water 427–444
- special pigments, classification 56
- specialty filler pigments 52–55
- specialty papers
 - additives 96–101
 - calendering 307
 - machines 326–329
 - paper grades 462–465
- specialty pigments 36
 - data 37
 - examples 39–40
- specific surface area, fillers 43
- spiral wrapping machines, roll handling 394
- starch
 - coating 358
 - cooking 359
 - market figures 68–69
 - modification and conversion 70–72
 - paper coating 108
 - resins 89
- steam heated cylinders 281
- stock components, mixing 256
- stock consistency, papermaking 6
- stock dyeing 78–79
- stock preparation 150–207
 - fibers 4
 - water circuits 212
- storing, main unit processes 193–194
- strain at rupture, paper testing 469
- strength, paper testing 469–471
- stress relaxation, coating colors 367
- stretch film, roll handling 395
- styrene-maleinate polymers 85–86
- suction rolls 225
- sulfite wrapping paper, paper grades 458
- supercalenders 297, 299
- supply systems, coating colors 365–366
- surface coloring 79
- surface properties, paper testing 471–472
- surface sizing 290–292
- surface strength, coating 370
- suspended solids removal, wastewater 423
- suspension jet, headbox 259, 264
- swimming roll 226
 - calendering 296
- synthetic latex binders 109–110

synthetic sizing materials 84–86
 syphons, dryer section 282

t

table rolls, operation mode 270
 talc 51, 58–59
 tanks, coating 361
 tapa 7
 tape turn-up system, reeling 316
 tappi brightness 36
 taste, coated surface 373
 tear resistance, paper testing 470
 technical papers and board, paper grades 462–465
 tensile strength, paper testing 469
 testing, paper and board 467–474
 thermal coatings, paper machines 240
 thermoplastic covers, paper machines 242
 thickeners
 – coating color 114–116
 – paper surface 121
 through air drying 283, 289–290
 tinting, paper surface 123
 tissue
 – cylinder 287
 – dryer hood 288
 – machines 324–326
 – paper grades 461
 titanium dioxide 53, 60
 topography, paper testing 471
 transfer belts 251
 transparency, paper testing 472
 turn-up systems, reeling 314–316
 twin wire presses 187
 two-drum winders, reel-slitting 386–389

u

uncoated papers, calendering 306
 urea-formaldehyde resins 92
 utilization, disposal 437–444
 utilization rate
 – different paper grades 27–28
 – recovered paper 25–26

v

vacuum treatment, deaeration 258
 vegetable gums, resins 89
 viscoelasticity, coating colors 367
 viscosity, coating colors 366
 visual defects, coated surface 371

w

washing 185
 waste handling, agricultural utilization 442

– in-mill 434–437
 wastewater 422–427
 – anaerobic treatment 425
 – characterization 426
 – treatment 423–425
 water, process chemicals 142
 water absorption, paper testing 473
 water circuits 208–218
 water loops 210
 water retention
 – coating colors 368
 – coating machines 375
 water sources, clarification 142–148
 water-vapor permeability 474
 wear protection, paper machines 230
 web break, paper machines 222
 web break monitoring, information systems 419
 web forming principles 268–269
 web handling, dryer section 286
 web inspection, information systems 419
 web separation device, reel-slitting 386
 web-wide cutting knife systems, reeling 316
 Wei T'o Process, paper deterioration 484
 weight profile, headbox 265
 wet end, machine direction control 412
 wet processing, kaolin 46
 wet strength resins (WSR) 91–94
 wetting, paper testing 473
 white water, mixing 257
 white water circuit system 211
 white-lined chipboard, components 354
 whiteness, coated surface 372
 winder types, reel-slitting 386
 winding parameters, reeling 310
 wire cleaning 273
 wire section, paper production 267–275
 wires, multi-layer 272
 wood-containing papers
 – calendering 304
 – coating machines 378
 – grades 452
 – graphic 197–201
 – paper machines 318
 wood-free graphic paper grades 201
 wood-free natural printing papers, paper grades 453
 wood-free paper grades, calendering 306
 wood-free papers, coating machines 378
 wrapping machines, types 393
 wrapping material, roll handling 392
 WSR *see* wet strength resins
