

# Index

## A

- Activation energy, 104–106
- Adiabatic calorimeter, 32
- Antislip applications, 179
- Arrhenius equation, 3
- Artificial reefs, 178, 182
- Asphalt, 178, 192

## B

- Bilayer rubber compounds, 115–117
- Boundary conditions, 25–26, 42–43, 152–153
- BS 1673, 137

## C

- Calorimeters
  - with cylindrical sample, 48
  - description of, 47–48
  - with horizontal sensible detector, 49–50
- Calorimetry
  - conclusions regarding, 57
  - differential scanning
    - cure enthalpy measurement using, 51
    - description of, 18
  - enthalpy changes, 47
  - isothermal
    - cure enthalpy measurements using, 50–51
    - description of, 12–13, 47, 201
    - disadvantages of, 57
    - techniques, 50–53
  - principle of, 47–48
  - in scanning mode, 53, 56
  - studies of, 11
- Carbon, 35
- Carbon black, 181, 190
- Coefficient of convection, 154–155
- Compression plastimeters, 135, 137
- Concrete, 179, 189
- Conduction, 8–11, 150
  - boundary conditions, 25–26
  - definition of, 21
  - differential equation of, 22–24
  - general solution of, 24–25
  - initial conditions, 25
  - principle of, 22
- Constant pressure method, 172
- Constant volume method, 171–172

## Convection

- definition of, 21, 26
- forced, 27, 198
- natural (free), 27–28

## Cooling

- perfectly cured rubber
  - in motionless fluid, 35–38
  - in stirred fluid, 39
- rubbers, 35–42
- temperature affected by, 43

- Crank–Nicholson finite-difference implicit method, 10

## Cure

- enthalpy of. *See* Enthalpy of cure
- extent of, 11–15
- in isothermal moving disc rheometer, 58–66
- kinetics of, 13, 101–106, 199–202
- rate of, 3, 8
- rubber–metal sandwiches, 110–114
- scrap rubber, 183–184, 192
- state of. *See* State of cure
- summary of, 197–199
- temperature coefficient of, 4–5
- temperature of, 11–15, 98–101

## Cure reaction

- expression of, 15–17, 197–198
- kinetics of, 51–57, 197

- Cured rubber, heating stage of, 39–42

## Curemeters, 136–137

## Curing agent, 158–160

## D

### Die swell, 135

- Differential scanning calorimetry
  - cure enthalpy measurement using, 51
  - description of, 18

### Diffusion

- boundary conditions, 152–153
- of curing agent, 158–160
- description of, 198
- differential equations of, 151–152
- examples of, 160–167
- infinite coefficient of convection, 154–155
- initial conditions, 152–153
- one-dimensional, 151–152, 158
- parameters of, 155–156
- principle of, 150–151
- radial, 152, 156–157
- through sheets

- with change in dimensions, 160–162
- description of, 153–154
- EPDM sheets with different percentages of peroxide, 162–167

Diffusivity, 155

Disc test, 135

Drug delivery systems, 172–173

Drying of rubber, 167–169

Dynamic motion, 143

Dynamic stress/strain, 143–145

## E

Elastomers, 12, 16

Enthalpy of cure

- description of, 50–51
- measurement of, 50–51
- mold effects, 92–98
- in scanning mode, 53

EPDM rubber discs, 164–167, 184–185

EPDM sheets, 162–167

Evaporation, 169

Extrudibility, 136

Extrusion plastimeters, 135

## F

Fermentation, of scrap tires, 181

Fick's laws, 150, 157

Flory–Rehner equation, 149

Forced heat convection, 27

Forced vibration, 144

Fourier numbers, 9

Fourier's law, 22

Free vibration, 144

Freeman–Carroll method, 54, 72

## G

Garvey die, 135

Gas chromatograph, 172

Gases, rubber permeability to, 170–172

Gravimetric method, 149

Ground flash rubber, 184

Gum reactions, 34–35

## H

Hard rubbers, 16

Hardness of rubber, 138–139

Heat conduction, 8–11, 150

- boundary conditions, 25–26

- definition of, 21

- differential equation of, 22–24

- general solution of, 24–25

- initial conditions, 25

- principle of, 22

Heat convection

- definition of, 21, 26

- forced, 27, 198

- natural (free), 27–28

Heat exchange, 43

Heat radiation, 2

Heat transfer

- boundary conditions, 42–43

- description of, 13, 17

- equations for, 83, 124

- infinite, 28–30

- methods of, 21–22

- between solid and a fluid, 26

- through rubber sheet immersed in a large volume of fluid, 31

Heating rate

- changes in, 74–75

- description of, 54

- isothermal Moving disc rheometer with constant heating rate, 67–74

Highway abutments, 178, 182

## I

Incineration, of scrap tires, 180

Infinite heat transfer, 28–30

Injection molding

- advantages of, 132–133

- cure in the mold, 124–132

- description of, 106, 197

- heating stage, 122–124

- injection stage, 123

- operational conditions, 122–124

- principles of, 121

- stages of, 121

In-phase modulus, 144–145, 187

International Rubber Hardness Degrees scale, 139

Isothermal differential calorimetry

- cure enthalpy measurements using, 50–51

- description of, 12–13, 47, 201

- disadvantages of, 57

- techniques, 50–53

Isothermal moving disc rheometer

- conclusions regarding, 66–67

- cure in, 58–66

- description of, 47, 58

- drawbacks for, 67

- in scanning mode with constant heating rate, 67–74

- summary of, 79

## K

Kinetics of cure, 13, 101–106, 199–202

**L**

- Landfills, 192
- Liquid absorption
  - conclusions regarding, 5–7
  - experimental, 1–3
  - principle of, 1
  - summary of, 200
  - verification of, 5
- Liquid transport
  - diffusion. *See* Diffusion
  - summary of, 200
  - swelling tests, 149–150

**M**

- Mold
  - activation energy effects, 104–106
  - enthalpy of cure effect, 92–98
  - heating system, 84–89
  - injection molding vs., 132–133
  - kinetic parameters of cure, 101–106
  - rubber sheet thickness, 84, 89–92
  - rubber–mold relation, 83–89
  - summary of, 117–118
  - temperature effects on cure, 98–103
  - vulcanization in, 8–11
- Monsanto rheometer, 137
- Mooney viscometer, 16, 47, 58, 135, 137
- Moving disc rheometer
  - conclusions regarding, 66–67
  - cure in, 58–66
  - description of, 47, 58, 197, 199
  - drawbacks for, 67
  - improvements for, in scanning mode, 74–78
  - oscillating disc rheometer vs., 137–138
  - in scanning mode with constant heating rate, 67–74
  - summary of, 79

**N**

- Natural (free) heat convection, 27–28
- Nominal stress, 140
- Nüsselt number, 27–28, 50

**O**

- Oil spill cleanup, using shredded scrap tires, 178
- Oscillating disc rheometer, 47, 58, 137

**P**

- Parallel plate compression plastimeters, 16, 137
- Percentage of plasticizer, 140

- Perfectly cured rubber, cooling stage of
  - in motionless fluid, 35–38
  - in stirred fluid, 39
- Plasticity, 135–138
- Plastimeters, 135–136
- Plate test, 135
- Polymers, 35
- Postcure, 106–110, 199
- Pyrolysis, of scrap tires, 181, 189–190, 192

**Q**

- Quenching, 34

**R**

- Radial diffusion, 156–157
- Rate of cure, 3, 8, 12
- Reaction modified thermoplastic elastomers, 132
- Reciprocating paddle curemeter, 137
- Rheometer
  - moving disc. *See* Moving disc rheometer
  - oscillating disc, 47, 58, 137
- Road base, scrap tires for, 179, 182–183
- Roof coating, 179
- Rotation plastimeters, 135
- Rubber
  - bilayer compounds, 115–117
  - cooling stage of, 35–42
  - drying of, 167–169
  - gas permeability of, 170–172
  - hardness of, 138–139
  - mold and, relationship between, 83–89
  - recycling of, 133
  - resistance of, to liquid, 149–173
  - scrap, 183–184, 191. *See also* Scrap tires
  - specific heat of, 32–33
  - summary of, 117–118
  - surface heat transfer coefficient of, 34
  - thermal conductivity of, 33, 35
  - thermal diffusivity of, 33–34
  - unvulcanized, 135–138, 199
  - vapor permeability of, 170–172
  - vulcanized, 138–145, 182
- Rubber cure. *See also* Cure
  - with injection molding. *See* Injection molding in mold. *See* Mold
  - summary of, 114–117
- Rubber process analyzer, 79, 121, 133, 197, 199
- Rubber recycling. *See also* Scrap tires
  - conclusions regarding, 191–192
  - description of, 133, 177
  - financial considerations, 183
- Rubber sheets
  - cooling of, 107–109
  - cure of, 85–89
  - cure–time cycle, 106

- diffusion in, 153–154
  - impact noises in house absorbed using, 188–189
  - mid-plane of, 84
  - postcure effects, 106–110
  - thickness of, 84, 89–92
  - vibration isolation, 185–188
- Rubber–calorimeter interface, 48–49
- Rubber–metal sandwiches, 110–114

## S

- Scanning mode with constant heating rate, 67–74
- Scorch time, 136–138
- Scrap rubber
- cure of, 183–184, 192
  - distribution into polymers, 191
- Scrap tires
- antislip applications for, 179
  - artificial reefs created from, 178, 182
  - in asphalt, 178, 192
  - biodegradation of, 181–182
  - carbon black manufacture from, 181, 190
  - chemical applications for, 180–182
  - in concrete, 179, 189
  - disposal of, before 1974, 177–182
  - erosion control uses of, 179
  - fermentation of, 181
  - fuel value of, 180
  - highway abutment uses of, 178, 182
  - incineration of, 180
  - in landfills, 192
  - physical uses of, 178–179
  - pyrolysis of, 181, 189–190, 192
  - reclaiming of, 180–191
  - retread industry uses of, 179
  - road base use of, 179, 182–183
  - roof coating uses of, 179
  - sound attenuation uses of, 179
  - splitter industry uses of, 179
  - in synthetic turf, 178
  - yeast metabolism of, 181–182
- Shear stress/strain, 142
- Short-term stress, 138
- Specific heat, 32–33
- Splitter industry, 179
- Square-root time–temperature dependence, 75–76
- State of cure
- calculating of, 3–4, 7
  - evaluation of, 199–202
  - numerical evaluation of, 7–8
  - profile of, 109
  - temperature effects on, 99
  - time curves, 16
  - in vulcanizates, 106
- Strain properties tests, 138

- Stress/strain
- compression, 140–142
  - dynamic, 143–145
  - shear, 142
  - tensile, 139–140
- Stress/strain relationships, 138
- Styrene butadiene rubber, 185
- Surface heat transfer coefficient, 34
- Swelling, 149–150, 164
- Synthetic turf, 178

## T

- Tear tests, 142–143
- Temperature
- cooling period effects on, 43
  - cure of rubber affected by, 98–101
  - gradients of, 56
  - thermal conductivity affected by, 35
- Temperature coefficient, 4–5
- Temperature profile, 1
- Tensile stress/strain, 139–140
- Thermal conductivity
- description of, 33
  - temperature effects on, 35
- Thermal diffusivity, 33–34
- Thermoplastic elastomers, 132
- Thermoplastic vulcanizates, 184
- Toluene, 162–163
- Torque–temperature curve, 69–71
- Transdermal drug delivery systems, 172–173

## U

- Unsaturated elastomers, 16
- Unvulcanized rubbers, 135–138, 145, 199

## V

- Vapors, rubber permeability to, 170–172
- Vibration isolation rubber sheets, 185–188
- Vulcanization
- agents in, 67
  - description of, 8–11, 47, 183
  - shortening of, 106
  - sulfur, 47
- Vulcanized rubbers, 138–146, 182

## W

- Wallace–Shawbury curometer, 47, 58, 137

## Y

- Yeast metabolism, of scrap tires, 181–182
- Young's moduli, 143
